

1992 Pontiac Grand Prix

Turnkey Lemon's Race Car with Extras – Ready To Go! Just Add Gas!

1992 Pontiac Grand Prix – 3.4L V-6 Engine

If you want to go Lemons racing, don't know where to start or just don't have time to assemble everything, this is the way to go! The car is well sorted out and everything has already been done. No unusual tire or brake wear issues, no overheating issues at all. If you already have a car, this would be a great package to buy and rent out to your friends that keep bugging you to race and offset some of the cost!

This car is fun, competitive and easy to drive! This car has been through Lemon's tech several times with flying colors. All of the safety equipment will satisfy even the most critical of inspectors!

Safety equipment Included and installed:

Roll cage. Kirkey racing seat with removable cover. New G-Force safety belts good through 2015. Fire extinguisher bracket is securely mounted. Panoramic mirror.

Required electrical cutoff switch has been securely mounted and required emblems are in place. Battery box is securely mounted. All the required roll bar padding is in place.

Extra parts included:

Four extra wheels and tires. None of the wheels are bent. Two of the tires are brand new Michelin Pilot Sport A/S tires, never run. You could easily run at least one race with the tires that are included in the package.

We have a set of front rotors turned and ready to go. Two sets of front brake pads and a set of rear brake pads. The front pads have one race on them and *may* need to be changed. The rear pads only have one race on them, they should last for several more races. Extra serpentine belt. The battery is less than a year old.

Two Motorola SP-50 radios, batteries and chargers. The car has the radio wiring harness already installed with a push-to-talk button on the steering wheel. A new high-gain antenna has been installed as well. We were having a hard time hearing the driver if he was out of sight on the backside of the track (ie. MSR Houston or Eagles Canyon), the new antenna solved the problem!

Cool suit cooler is also included. Hold down straps already installed and it has been wired as well. The fittings you will need if you decide to make your own shirts are readily available from McMaster-Carr. If you've never driven with a cool suit, you don't know what you're missing!

The original documentation book with receipts is also included. This car has competed enough that the BS inspectors don't even bother to look at the documentation anymore and we've NEVER been given any BS laps!

As stated, this is a very complete package. We'll be happy to show you how we get the car ready to race and get you started if you're new to Lemons.

The car is kept indoors in our garage in Lewisville, Texas. We can also help deliver the car within a reasonable distance if you don't have a trailer available.

No warranty or title included..
